1. This communication is in response to applicants' amendment filed on June 5, 2003.

2. Claims 11,48 are objected to because of the following informalities: the phrase "each at least one" at line 7 needs to be corrected. It is unclear as to what is meant by "each at least one". It is also true for claim 48.

Appropriate correction is required.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined

under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 11-14,19,20,48-51,56-57,79-81,84-86 are rejected under 35 U.S.C. 102(e) as being anticipated by Hagiwara et al. (6,181,138).

As to claims 11-14,19,20,48-51,56-57,79-81,84-86, Hagiwara discloses an apparatus for monitoring the characteristics of formation with a tubular 102 having an elongated body with a longitudinal axis; at least one antenna (208,210,212,216,218,220) disposed on the exterior of the tubular axis at an angle in between 0 to 90 degrees (Note Figs. 2,4,5,9) with respect to the axis of the tubular to provide measurement about a targeted orientation within the formation. Hagiwara inherently discloses electronics to activate antenna to transmit or receive electromagnetic energy.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15-18,52-55,82-83,87 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hagiwara.

As to claims 15-18,52-55, Hagiwara discloses an apparatus for measuring the resistivity of the formation as explained above. Hagiwara fails to show an insulator between the antenna and the tubular body or a shield. It is common practice in the art to use such insulator or shield to protect transmitter/receivers from damage or to insulate tubular body from the coil (as evidence in Hubans and as applicant admitted on page 13, lines 24+).

As to claim 82-83,87, Hagiwara does not show angled recess. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the slot of Hagiwara to make said slot angled to mount antenna in it so that the mounting of the antenna would be sturdy and more stable. This would also prevent antenna from moving.

5. Applicant's arguments with respect to rejected claims have been considered but are moot in view of the new ground(s) of rejection.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
